

MOBILE TECHNOLOGIES AND PROGRAMMING

LAB4 – Introduction to Android Programming

1. Hello World.

Create a basic "Hello World" Android application using Jetpack Compose featuring:

- a) Text component
- b) Image component

Please provide only the code for the activity class. Do not include the entire project in your response.

2. Handle click event and start new activity.

Create an Android application using Jetpack Compose with two screens implemented as two activities.

Requirements:

- The first activity should display a text and a Button.
- When the button is clicked, the second activity should be launched.
- The second activity should display a short text, for example: "Hello second activity!"
- The user interface should be built using Jetpack Compose.

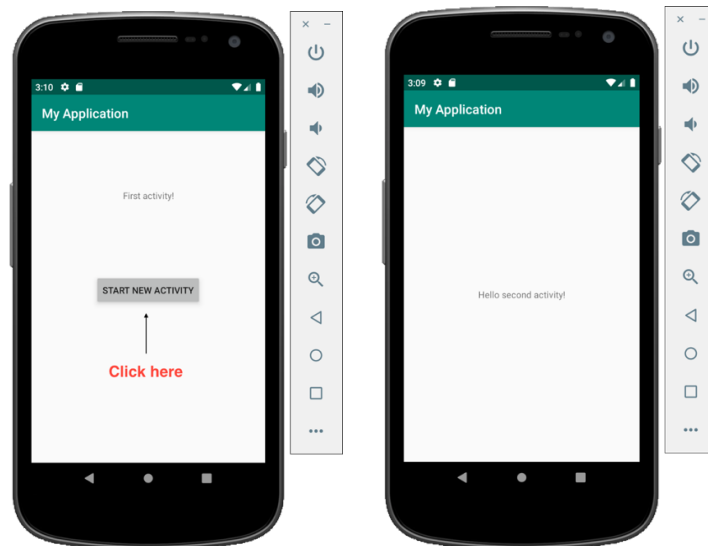

Fig. 1

Please provide the code for both activity classes and any required additions to AndroidManifest.xml. Do not include the entire project in your response.
